## BAG FILTER HOUSINGS FSPN Vessels

### Introduction

The FSPN line of filters covers nearly every fluid application need. From the compact FSPN-20 miniature single bag filter vessel to the large multi-bag designs, we have exactly what your flow demands require. The FSPN vessels can also be equipped with a variety of lid opening styles including manual, hydraulic, spring assist and Easy Open.

FSPN filter vessels using size 1 and 2 filter bags are designed, built and stamped to meet code requirements in our own ASME Code manufacturing facilities. Standard equipment features like the single-gasket seal, with sturdy perforated metal baskets provide durable and consistent performance.

### Features

- Stock, Standard and Custom designs available
  - *Stock:* 1-8 bags
  - *Custom:* Available up to 99 bags
- ASME Code
- NPT or flange connections
- Positive bag seating without the use of a manual hold-down device
- Single gasket lid seal
- Full ports for unrestricted flow

## BAG FILTER HOUSINGS FSPN E-Z Open

### Introduction

The FSI answer to time-saving operations is the patented FSPZ Easy Open Lid Vessel, the innovative alternative to manually opening and closing a filter vessel. Utilizing a unique sliding bracket retaining system, it's operated simply by using the lid activator handle. The Easy Open Lid rotates and raises to a locked position in the time it normally takes to loosen one or two eyebolts on a conventional vessel.

The Easy Open Lid is available on bag filter models holding 4 to 24 bags. It can be fully opened in under 30 seconds which significantly lowers the cost of operating your vessels, and makes the change-out procedure easier and safer.

### Features

- Innovative lid closure system opens in 30 seconds or less—no tools required, for faster change-outs with less effort
- Hydraulic opening and lifting device offers improved ergonomics to avoid repetitive-use injuries
- Splash shield, pressure relief valve, indicator lock pin and alignment pins assure safe operation
- Standard design pressure rating of 150 PSI

## BAG FILTER HOUSINGS CBFP 11, 12 Vessels

### Introduction

When looking for a cost-effective single-bag filter vessel that is both durable and reliable, look to the FSI CBFP series vessels. Although the standard CBFP series vessels do not carry an ASME Code stamp, you can still realize the benefits of an economic filter vessel that is manufactured to the same high standards and engineering expertise that characterizes all of our other FSI vessels.

### Features

- Offset, Side Inlet with Side Outlet (same side or opposite), or Side Inlet with Bottom Outlet configuration available
- Positive bag seating without the use of a manual hold-down device
- Single gasket cover seal
- Connections sizes available in either 2" or 3" NPT or flange

## BAG FILTER HOUSINGS CBFP 13, 14 Vessels

### Introduction

The CBFP 13 & 14 are cost effective bag filter vessels that are durable and reliable for low flow applications using a size 3 or 4 filter bag.

### Features

- Offset, Side Inlet with Side Outlet (same side or opposite), or Side Inlet with Bottom Outlet configuration available
- Positive bag seating without the use of a manual hold-down device
- Single gasket cover seal
- Connections sizes available in either 1" or 2" NPT

## BAG FILTER HOUSINGS QX4 Filter Vessel

### Introduction

*(Uses Bags, ClearPleat PC Cartridge or NMO Welded Seam Bag)*

The patented quick change QX4 filter vessel is designed to improve filtration efficiency, while saving time and production costs. Filter bags forming a positive seal in this vessel are available in polyester and polypropylene felt, along with polyester and nylon mesh. The new FSI ClearPleat PC absolute rated filter cartridge seals in this lightweight filter vessel providing absolute rated filtration in low flow industrial applications.

The QX4 is ideal for applications including gravure ink, flexographic ink, hydraulic fluid, cutting oil, coolants, parts washers, injection molding, spray nozzle protection, pre RO systems, pump seal protection, glue applications, and other low flow industrial applications.

### Features

- Quick change in less than 30 seconds
- Easy disassembly, no tools required
- Lightweight – less than 8 lbs.
- PolyLoc® bags available in nylon monofilament, polyester multifilament, polypropylene and polyester felt for use with standard basket
- Flat bottom basket designed for use with ClearPleat PC, FSI's absolute rated pleated cartridge, or welded seam nylon monofilament filter bags

## BAG FILTER HOUSINGS SBF Compact Bag Vessels

### Introduction

When space is an issue, look to FSI's compact bag filter. The SBF-75 is a reduced-size filter made with the same attention to detail that is in all of our larger designs. With dimensions of less than 10" high by 2 7/8", you get a full-featured bag filter that provides a full range of micron ratings.

### Features

- Compact housing allows for filtering applications where space is limited
- Single bag filter is ideal for low flow systems
- Top-mounted lid swings away for easy access for easy cleaning and bag changes
- Nylon monofilament filter bags, available in micron ratings 1-400, offer broad range of chemical resistance, are unaffected by metal fatigue and corrosion, and do not release fibers into fluid flow
- Welded seam construction of the filter bags eliminates fluid bypass

## BAG FILTER HOUSINGS FMC Drum Filters

### Introduction

For filling lines, FSI offers the answer for the final filtration stage with the FMC-22, a light weight, easily maneuvered, quick-disconnect filter. It has a bag filter, positive gasket seal, restrainer basket, coupling and directional nozzle in one self-contained vessel. The unit even features built-in stops to limit insertion depth into closed head drums.

FSI offers this final stage drum filter in Stainless Steel or Carbon Steel, for applications ranging from chemicals, paints, inks, solvents and resins, to oil, petrochemicals and more viscous products as well.

### Features

- FMC 1½" quick connect female coupling and Buna-N gaskets offered standard; optional 1½" male connector also available
- Nylon monofilament (NMO) bag features molded plastic seal to prevent fluid bypass
- Filter vessel made from 316 Stainless Steel or Carbon Steel.
- Overall length is only 9¼"
- Positive gasket seal available in Buna-N (standard), EPDM
- Shell, collar, coupling, stop pins and all parts included (also available without stop pins)

## CARTRIDGE FILTER HOUSINGS FSMC Cartridge Filter Vessels

### Introduction

The FSMC Series is an industrial cartridge filter vessel from FSI. The filter vessels are available in standard sizes to hold from three (3) to eighty-one (81) cartridges, with standard 2.5" OD, either DOE or 222 end cap SOE captive spring.

FSMC filter vessels are rated at 150 PSI (10.34 Bar) and standard materials include CS, 304 SS and 316 SS. All FSMC vessels are manufactured by FSI and meet ASME Code requirements.

### Features

- Accommodates from three (3) to eighty-one (81) cartridges
- Standard Cartridges:
  - 1.0" ID x 2.5" OD (2.7 cm x 6.35cm)
  - 20" (50.8cm) Length
  - 30" (76.2 cm) Length
  - 40" (101.6 cm) Length
- Double Open End
- Single Open End Captive Spring Cartridges with 222 End Cap
- Available in Carbon Steel, 304 Stainless Steel, or 316 Stainless Steel
- Flange connections
- Meets ASME Code - ASME "UM" Stamp Standard, ASME "U" Stamp optional
- Elimination of sump disassembly with top-loading design

## PLASTIC FILTER HOUSINGS X100 Convertible Filter Housing

### Introduction

Different industrial applications can have different requirements in terms of equipment and filter media. The X100 filter housing is highly adaptable to precisely fit your particular needs. This strong, light weight and economical filter vessel is resistant to a wide range of chemicals, and converts easily from filter bag usage to cartridge filters. It allows the user to choose the filter media and construction to precisely fit their particular needs.

The X100 is manufactured from polypropylene, with a UV inhibitor for all-weather durability. The specially designed, threaded lid allows for sealing and unsealing without the need of tools.

### Features

- 100% Polypropylene Construction
- UV inhibitor for long-lasting, all-weather operation and durability
- Easily convertible between bag filter and cartridge filter housing
- Filtration media available in 1-800 micron ratings
- Twist-off lid design requires no tools for quick and easy change-out
- Clean wall design provides easy access for manual cleaning or in-place flushing
- Side inlet/bottom outlet eliminates sump to reduce waste
- Hermetic sealing bag and cartridge filters result in no fluid by-pass
- X100 bag and X100 with X20 cartridge are FDA compliant

## PLASTIC FILTER HOUSINGS XL234 Modular Filter Housing

### Introduction

XL234 Modular Filter System makes change-outs faster and easier than ever with its unique twist-off lid. You can choose from a 7-cartridge system or our new patented EZLoc filter bag with a built-in polypropylene ring that makes filter bypass a thing of the past. Either choice offers long service life and can be changed in minutes without tools!

### Features

- Sturdy vessel construction – glass-filled polypropylene with UV inhibitors for durability and compatibility with a broad range of chemicals
- Corrosion and Rust Resistant
- Quick and easy lid system requires no tools for opening and closing
- Molded legs for easy installation
- Sacrificial vent grommet safety feature to indicate filter is completely closed, preventing accidents

#### Cartridge System:

- Vessel is 100% nonmetallic including cartridge carrier and holds seven standard 20", 30" or 40" cartridges
  - Double Open End
  - Single Open End 222 "O" Ring with Bayonet
- Uses Standard Vorex or Vorex HP (absolute rated) cartridges
- Increased surface area for flow rate of up to 140 GPM

#### Bag System:

- Vessel is 100% nonmetallic with 100% polypropylene basket
- Bag has 20% more surface area than standard #2 filter bag for flow rates up to 160 GPM
- EZLoc patented filter ring snaps in easily to form a hermetic seal, preventing bypass
- Variety of materials available including: *(see chart for micron ratings)*
  - Polypropylene Felt
  - Polypropylene Microfiber
  - Polypropylene Monofilament Mesh

## SPECIALTY FILTER HOUSINGS

### Basket Strainers

#### Introduction

FSI strainers are designed and built to the same standards as other FSI vessels. Durable, ASME Code construction, an efficient in-line and offset style design, and inlet/outlet ports from 2" up to 16" provide the economical solution to most industrial straining requirements. Typical applications include water and waste treatment industries, power generation plants, and the marine, paper, pharmaceutical and food industries.

An important design element to consider in a basket strainer are the free open areas. This is the ratio of open area through the strainer basket to the cross sectional area of the pipeline. FSI strainers provide at least an 8 to 1 ratio. Anything less may cause additional pressure drop.

#### Features

- Single basket strainers up to 8" pipe size available
- Standard 150 PSI ASME Code construction
- Compact multi-basket designs eliminate tall, difficult-to-remove baskets to save space and for ease of cleaning
- Standard Stainless Steel basket material has 9/64" diameter perforations, offering 50% open area (*mesh lined also available*)
- Easy-to-remove baskets and quick opening, swing-type head cover, promote fast cleaning and filter change-out (*hydraulic lid lifter also available*)
- Up to 6000 GPM flow rate

## FELT FILTER BAGS Standard Felt Filter Bags

### FSI Felt Bags are the Answer

When it comes to felt filter bags, FSI has the answer. Our years of experience give us an advantage over our competitors, and our felt filter bags show it. Our felt bags are designed to withstand higher solid loading, and are suitable for applications using vessel or open filtration systems.

FSI's "Comprehensive Manufacturing Control" philosophy insures that we will maintain our status as the industry leader in all phases of the filter business. Our integrated technology, control over our manufacturing and quality leads to consistent performance. With FSI filter bags, you can count on a quality product every time.

We start with the finest material possible. FSI makes its own fiber to produce the felt material used in our felt filter bags inhouse, guaranteeing the highest quality. Our Extended Life filter bag provides superior filtration of all sized particles, as well as up to twice the dirt holding capacity of a standard filter bag.

Our no-bypass welded seams eliminate the possibility of fluid bypass through needle holes. We provide a variety of glazed and singed finishes to inhibit fiber migration. FSI also offers polyester inserted felts. These inserted felts include a reinforcing scrim needled inside the felt material, to provide added strength and durability, when a restrainer basket is not being used.

## Features

- We offer a full line of felt materials and micron ratings
- Conventional sewn bags or the PolyWeld® welded seam bags available
- FSI PolyLoc® ring or other common bag rings available on most bags
- Heavy Duty and Extended Life designs available to suit your filtration needs

## Specifications

## FELT FILTER BAGS Polyweld® Filter Bags

FSI's PolyWeld® filter bags hold a distinct advantage over all types of needle-sewn bags. The welded seams completely eliminate the possibility of unfiltered liquid bypass occurring due to needle holes. The result is a tighter seam, higher bag efficiencies and improved finish product yields. In addition, the fused edges of our PolyWeld bag provide a fiber-free finish and virtually eliminate unwanted fiber migration. Since the PolyWeld bag is not constructed with thread, the possibility of silicone contamination from this source is also removed. FSI's PolyWeld filter bags are available in standard and extended life polypropylene felt, and standard and extended life polyester felt.

## Features

- Welded construction of bags completely eliminates unfiltered liquid bypass from occurring due to needle holes
- Available in standard polypropylene, polyester and extended life felt for broad range of product compatibility
- Glazed finish eliminates fiber migration for clearer results
- PolyLoc® ring creates a hermetic seal that prevents liquid bypass and produces clearer results
- Polypropylene is FDA food grade compliant to government standards
- FDA Compliant Polyester felt is available (non-standard)
- Silicone free to eliminate cratering for improved surface results
- Available from stock for quick delivery

## FELT FILTER BAGS Extended Life Filter Bags (POEX/PEEX)

The Extended Life filter bags (POEX and PEEX) provide outstanding performance on many types of contaminants such as gels, particles with wide ranges of sizes, and particles with various irregular shapes. The coarse, pre-filtering layer is designed to provide long service life, capturing a large amount of contaminants without excess surface loading. The POEX has been field-proven to hold up to twice the amount of contaminants as a standard felt bag, reducing waste volume and bag changes. The Extended Life filter bag is ideal for automotive coatings, chemicals, resins, edible oils and other fluid applications.

## Features

- Excellent filtration on many contaminants - gels, particles with wide range of sizes and particles with irregular shapes
- A coarse inner layer, graded pore structure, greater depth than standard bags provides excellent filtration performance
- Available in polyester (PEEX) and polypropylene (POEX)
- Twice the standard dirt-holding capacity of traditional felt bags to provide longer service life, fewer change-outs and reduced waste
- Polypropylene bags are FDA compliant
- Micron rating for polypropylene 5-100; polyester 1-100
- PolyWeld® seam construction with hermetically sealing PolyLoc® ring eliminates liquid bypass
- Glazed finish eliminates unwanted fiber migration

## FELT FILTER BAGS MAX PONG

The PONG Heavy Duty Extended Life filter bag (MAX PONG) is the leader in high-efficiency, low-cost filtration. Its seamless micro-fiber graded density cartridge insert removes trace oils that frequently occur in process fluids, and provides up to four times the dirt-holding capacity of conventional polypropylene bags. Combined with its welded seam felt cover and PolyLoc® ring for elimination of unfiltered bypass, it becomes the perfect choice for uses where longer-lasting, high-efficiency filter bags are needed. The MAX PONG Heavy Duty Extended Life filter bag is ideal for continuous flow applications such as e-coat and phosphate baths, and batch applications including oils, edible oils and syrups, or any final or polishing filter requirements.

## Features

- High-efficiency, low-cost filtration is ideal for continuous flow applications
- Welded seam construction eliminates unfiltered bypass due to needle holes
- Large dirt-holding capacity and lower pressure drop provide long service life
- Adsorbs smaller particles and filters wide range of particle sizes
- Pure polypropylene microfiber insert contains no sizing, bonding adhesive, resin, lubricant, silicone or antistatic chemicals
- FDA compliant to meet food grade government standards
- PolyLoc® ring creates hermetic seal to prevent liquid bypass

## FELT FILTER BAGS PolyFold™ Filter Bag

The PolyFold™ is our proprietary filter bag constructed of dual-sided extended life felt. It features 2.4X additional surface area for high dirt-holding capacity and long service life.

### Features

- The dual-sided, extended life felt construction provides maximum dirt holding and a high flow rate
- 240% more surface area than a standard bag
- Fits in a standard basket, so no retrofit is required
- 4X+ dirt holding capacity\* results in longer life and fewer change outs
- Polypropylene center tube supports filtration media, aids in insertion of filter bag, and accepts a bag magnet
- PolyLoc® ring eliminates liquid bypass
- Mesh cover assists in insertion and removal of filter bag

*\*Compared to a standard felt bag. Based on lab testing using water and test dust.*

## POLYMICRO MICROFIBER FILTER BAGS POMF Filter Bags

The Polymicro microfiber filter bag (POMF) provides outstanding performance for applications requiring higher filtration efficiency. The POMF contains three layers: a pre-filtering layer that removes coarse debris; the primary layer, composed of micro pores (for efficient particle retention); and an outer cover that prevents fiber migration. The finish-free fibers are non-foaming, which is ideal for food, beverage, water, chemical and coating applications.

## Features

- Proprietary polypropylene, triple-layer construction adsorbs hydrocarbons from air, gas and aqueous streams for clearer results
- Outer cover prevents fiber migration to reduce waste
- Non-foaming microfiber offers product cleanliness, high performance and longer service life
- High void volume means longer service life, higher contaminant loading and reduced waste loads
- Easy change-out reduces down time
- PolyLoc® ring creates a hermetic seal within a vessel housing to prevent liquid bypass
- POMF 1A, 2A, 10A and 25A bags are made from FDA-compliant materials
- POMF 1A, 2A, 10A & 25A are available with NSF Standard 61 Certification
- Available in stock for quick, one-week delivery

The BOS filter bag is a Polymicro® seamless filter bag, constructed entirely without seams. This unique material composition allows for a higher efficiency, with graded pore-size distribution creating absolute filtration. Thermally bonded microfibers create a seamless filter bag that has high tensile strength, providing superior resistance to channeling, unloading, bypass and other forms of traditional leakage that result from pulsating water.

The benefit of using this advanced filter bag is precise particle retention. The BOS filter bag is an ideal product for use in a wide variety of high-purity applications, where absolute filtration is required.

### Features

- Seamless construction offers unequalled benefit of eliminating fluid bypass
- Absolute rated (98%) 3-100 microns for highest efficiency and consistent quality
- Microfiber-graded pore design provides lower initial pressure drop
- Thermally-bonded microfibers contain no sizing, bonding adhesive, resin or silicone
- FDA compliant
- Can be incinerated for easy disposal
- Available with NSF Standard 61 Certification

## Mesh Filter Bags

## SEAMLESS-ABSOLUTE RATED BOS Gradient Filter Elements

BOS Gradient Filter element is the first of its kind, with seamless design and true gradient density. This absolute rated element provides users with the depth of a cartridge and the convenience of a bag. This 100% polypropylene microfiber product adsorbs up to 16 times its own weight in hydrocarbons (oils) and will last up to 18 times the life of other products (depending on particle distribution and application).

## Features/Benefits

### Gradient Density provides:

- Up to 18 times extended life compared to other products, dependent upon particle distribution and application
- Longer life means fewer bag changes which results in lower labor costs and less loss of product
- Not compressible in operation providing greater dirt holding capacity
- Designed for typical broad particle distribution applications.
- Will allow more efficient filtration (lower micron) without sacrificing product life

### Polypropylene Microfiber Material

- Adsorbs up to 16 times its own weight in hydrocarbons (oils)
- Inventory reduction. Eliminates need for stocking "oil" bags
- Thermally bonded, with no lubricants or surface active agents
- Available with NSF Standard 61 Certification

### Fits existing FSI standard basket

- No retrofit costs

## SEAMLESS-ABSOLUTE RATED BOS MAX Filter

The innovative BOS MAX heavy duty seamless filter bags have an advanced design that provides extended life and increased efficiency with a greater depth filtration than conventional filter bags. It provides all of the benefits of the standard BOS filter bag with a semi-rigid microfiber insert that increases the dirt holding capacity of the filter while providing the absolute filtration of the BOS filter bag.

### Features

- BOS MAX Heavy Duty Extended Life Bags contain a semi-rigid, microfiber cartridge insert for up to four times the life of standard BOS bags and are ideal for high-purity applications
- Absolute rated 3-100 microns for high efficiency and consistent quality
- Thermally-bonded microfibers contain no sizing, bonding adhesive, resin or silicone
- Contaminant free to eliminate craters providing better surface results
- PolyLoc® ring creates hermetic seal within a vessel housing to prevent liquid bypass

## MESH FILTER BAGS

All FSI mesh bags are constructed using a woven or knitted fabric. Whether your particular environment requires a single filament mesh that provides excellent strength with no fiber migration, or a woven multi-strand mesh designed for economical filtration bags, we have your needs covered. The yarn in all of our mesh filter bags is abrasion resistant, compatible with a broad range of chemicals, unaffected by metal fatigue or corrosion, and boasts high tensile strength.

### Features

- Available in nylon monofilament, polyester multifilament and polypropylene monofilament offering broad range of chemical compatibility and price ranges
- Monofilament mesh bags provide extra strength and abrasion resistance
- Precision mesh materials produce predictable results for consistent performance
- Offered in standard and custom sizes to provide a perfect fit for standard and unique applications
- Offered in micron ratings 1-1500 with plastic and metal rings for versatility
- Silicone free to prevent cratering for a better surface finish

**Monofilament Mesh** is a woven fabric where each thread is a single filament, boasting excellent strength with no fiber migration.

**Multifilament Mesh** is a woven fabric where each strand consists of many smaller diameter threads.

## Flow Rates of Filter Bags

In most filtration applications, fluid viscosities do not exceed 50cps. Using the following Flow Rates Per #2 Size Bag as a guide, the suggested flow rates should result in a CLEAN Pressure Drop under 2 PSID.

Material Used	Micron Rating	Flow Rate (GPM)
Felt	1 & 3	80 GPM/#2 BAG
Felt	5 THRU 200	120 GPM/#2 BAG
Mesh	1, 3, 5 & 100	100 GPM/#2 BAG

## VOREX® FILTER CARTRIDGES

The Vorex® is a nominally rated microfiber cartridge that works well as either a pre-filter or final filter in a wide range of applications including industrial, chemical process, food & beverage, cosmetics and water.

Our Vorex® filters are manufactured through an exclusive process that thermally bonds pure polypropylene microfibers. Lower density fibers are at the surface and sequentially higher density fibers are used toward the center. This process traps particles more evenly throughout the cross section.

### Features

- Manufactured from 100% polypropylene microfibers eliminating extractables
- Adsorbs trace hydrocarbons for clearer results and faster rinse-in
- Provides high flow rates with lower pressure drops for longer life at a very economical price
- Singed finish eliminates fiber migration and produces a cleaner product
- Supports a wide range of chemical, industrial, food/beverage, cosmetics and water applications
- Available in 1-100 microns to meet a wide range of cleanliness applications
- Incinerates to non-volatile trace ash for easy disposal
- NSF 42 certified, FDA approved and rated USP Plastic Class VI to meet government regulations
- Silicone free material eliminates cratering to provide better surface results
- In-stock availability assures quick delivery and reduces your inventory costs
- Available with inner polypropylene core for additional support for high pressure applications

## VOREX® HP FILTER CARTRIDGES

The absolute-rated Vorex® HP cartridge provides superior flow, increased dirt holding capacity and a lower pressure drop. The HP cartridge is manufactured with 100 percent polypropylene microfibers and core. Thermal bonding eliminates the need for bonding resins and adhesives, which may be contaminants themselves. The innovative core provides stability, which allows for the use of very fine microfibers to greatly improve the filtration efficiency. The microfibers vary in diameter throughout the depth of the cartridge to attain an optimal gradient density with a much larger void area. The benefit is substantially longer on-stream life, increased dirt holding, and a lower pressure drop. The Vorex® HP cartridge delivers a highly cost effective filtration solution.

The Vorex® HP is excellent for many high purity and standard industrial applications including chemical process industry, pure water filtration, metal finishing, metal working, magnetic media, photographic, petrochemicals and potable water.

### Features

- Long on-stream life, superior dirt-holding capacity, and low pressure drop provide excellent cost savings
- Manufactured from 100% polypropylene for purity
- Silicone-free material prevents cratering and provides a better surface finish
- Foaming is eliminated with pure polypropylene microfibers that have no extrusion oils, surfactants or antistatic chemicals assuring better performance and faster rinse-in
- Thermally bonded end-cap configurations fit a variety of standard filter cartridge housings to reduce costs
- Polypropylene core is resistant to collapse, temperature effect, channeling and bypass
- Filter medium will not compress and unload trapped contaminants for improved efficiency and cleaner product
- Singed finish eliminates fiber migration producing clearer results
- FDA compliant for food and beverage applications and USP Plastic Class VI rated to meet government requirements

## POLYWOUND STRING WOUND FILTER CARTRIDGES

FSI Polywound filter cartridges are the result of years of experience, as well as extensive research and development, and state-of-the-art manufacturing technology. The Polywound nominally rated cartridges are available in a wide array of yarn and core materials, and are designed to meet a variety of industrial processing needs. This cartridge provides an exceptional quality media filter option.

### Features

- Available in polypropylene, polyester, cotton and baked glass for broad chemical compatibility and to meet a wide variety of applications
- Baked glass has high temperature compatibility of 750° F for greater versatility
- Single-strand, continuous winding process offers consistent quality, high particulate retention and reduced bypass for clearer results and long life
- FDA compliant polypropylene cartridges are available for food and beverage applications to meet government standards
- 2.5" OD is offered in standard lengths and 4.5" OD is available in 10" and 20" lengths to fit existing housings and replace most brands
- Micron ratings from 1-150 microns meet required cleanliness levels
- Well suited for applications such as paints, coatings and high-viscosity chemicals that need large particle filtration

**Vorex® Filter Cartridges**

**Vorex® HP Filter Cartridges**

**Polywound String Wound Filter Cartridges**

## CLEARPLEAT PC

When you want the highest-performance and greatest impact to the bottom-line possible, the solution is our new ClearPleat PC. Unique construction, longer service life, and greater product quality consistency are just a few reasons why the ClearPleat PC is the clear choice for critical applications requiring a “performance grade” cartridge.

### Features

- Absolute-rated (99.98%) provides consistent and repeatable filtration
- Pleated media provides longer service life (higher surface area) and less product loss (fewer changeouts)
- Thermal bonded construction improves cleanliness. Ultrasonic bonding of side seal eliminates debris.
- Fits BFNP 13 & 14, FSPN 20 & 35 filters with no retrofit costs
- Inside to Outside Flow allows contamination to be captured inside the element
- No crater-causing contaminants make it safe for use in all paint applications
- Dual cage is one-piece polypropylene with polypropylene end caps
- Available in nylon monofilament mesh and polypropylene microfiber

# FILTER CARTRIDGES

## Flow Rates of Filter Cartridges

For Cartridge applications with Water-Like Viscosities the following rules of thumb can be followed for 10" equivalent length. These flow rates should keep the CLEAN Pressure Drop under 3 PSID.

Material Used	Micron Rating	Flow Rate (10" Equivalent)
CWPO/PE	1 & 3	3 GPM/10"
CWPO/PE	5 THRU 50	4 GPM/10"
CWPO/PE	75 THRU 100	5 GPM/10"
CMMF	1, 3, & 5	3 GPM/10"
CMMF	10, 25 & 50	4 GPM/10"
CMMF	75, 100 & 150	5 GPM/10"
CMHP	1 & 3	2 GPM/10"
CMHP	5, 10, 25, 35 & 50	3 GPM/10"
CMHP	75 & 100	4 GPM/10"

## FerrX 5000® Magnetic Separator

## FerrX5000® Magnetic Separator

The patented FerrX5000® is specifically designed to remove ferrous materials from the effluents used to clean and rinse the surface of automotive and other welded body units, prior to the paint application. By positioning powerful rare earth magnets in the effluent stream, FerrX5000® attracts and captures ferrous particles. The self-cleaning cycle automatically purges these particles into a waste stream. No disassembly or daily attendance by plant personnel needed.

Field trials prove that the FerrX5000® can remove more than 50 pounds of ferrous material per day from the pre-clean phosphate tanks. A single unit installed in the phosphate pre-clean process has been proven to eliminate more than 50 percent of the metal particulate defects in a cured electro deposition surface.

### Features

- Fully Automated and Self Cleaning
- Stainless Steel Construction
- Captures Ferrous Material
  - Can remove more than 50 lbs. per day of ferrous material
  - Can eliminate more than 90% of ferrous particulate that comes in contact
- Compact Design with Rolling Cart
- Fail-Closed Inlet Valve
- PLC controlled
- Safe to Operate

## Glossary - A

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Abrasion

Migration of foreign material which enters the fluid stream from system components that wear from close tolerances, vibration or shock.

### Absolute

A term used to describe or define a degree of filtration. There are various methods used in the filtration industry to determine absolute ratings, which are not necessarily interchangeable. Absolute rated filters always state a removal efficiency at the micron rating, generally between 98 – 99.98%.  
*See nominal.*

### Absorb

To take up by cohesive, chemical or molecular action.

### Absorbent

A filter medium that is similar to a sponge, drawing fluid and retaining it within its structure. In this sense it can act as a filter to remove (adsorb) and retain fluid.

### Acidity

The quality, state or degree of being acidic. In lubricating oils, acidity denotes the presence of acid-type constituents whose concentration is usually defined in terms of a neutralization number. The constituents vary in nature and may or may not markedly influence the behavior of the fluid.

### Additive

A supplementary material combined with a base material to provide special properties.

### Adsorption

The attraction and/or the retention of particles by molecular attraction or electrostatic forces present between the particles and a filter medium. Also, the attraction of gasses, liquids or solids to surface areas of textile fibers, yarns, fabrics, or any similar type of material.

### Adsorbent

Any material which adsorbs: i.e., the solid which attracts and holds on its surface the gas, vapor or liquid. Also, a filter medium primarily intended to hold its soluble and insoluble contaminants on its surface by molecular adhesion – through no chemical change.

### Agglomerate

A group of two or more particles combined, joined or clustered, by any means.

### Aggregate

A relatively stable assembly of dry particles formed under the influence of physical forces.

### Ambient

Surrounding. For example, the ambient operating temperature of a vessel is temperature that is essentially the same as that surrounding the vessel.

### ASME

The American Society of Mechanical Engineers.

### Atmospheric pressure

The force exerted on a unit area by the weight of the atmosphere.

» Pressure Conversion Table  
» Conversion Factors

## Glossary B - Ce

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Back pressure

In filter use, resistance offered by the filter, usually measured in PSI.

### Backwash

To clean a filter element by reversing the direction of flow through it.

### Basket strainer

A vessel for the removal of coarse bulk solids from liquid, air or gas. The element is usually a steel perforated basket, or a mesh lined basket.

### Beta ( $\beta$ ) Ratio

The Beta ( $\beta$ ) Ratio is a rating system introduced with the object of giving both filter manufacturer and user an accurate representative comparison amongst filter media. Also, an indication of how a filter performs throughout the life of the filter. The Beta Ratio is an average filtration rating (single pass and multi-pass).

### Bleeder

A valve which diverts part of the fluid from the main flow of the system.

### BUNA-N

A synthetic rubber gasket material, used for vessel closures, flanges and filter elements.

### Burst

An outward structural failure of the filter element caused by excessive differential pressure.

### By-pass

A condition that occurs when:  
a) a bag or cartridge is not seated or sealed properly in the filter housing; or  
b) the filter media is violated and permits unfiltered fluid to pass through.

### Cake

Solids deposited on the filter medium during filtration in sufficient thickness to be removed in sheets of sizeable pieces. In many cases, cake may provide its own filter media by adding to the surface of the media.

### Capacity

The volume of product which a vessel will accommodate, expressed in gallons or similar units. Also, an amount which will filter at a given efficiency and flow rate, expressed in gallons per minute or similar units.

### Cartridge

A filter for the clarification of process liquids containing small amounts of solids. Made of a porous medium, it is used in a vessel, which performs the actual filtration process.

### Center-rod/ post

The component of a vessel used for mounting the cartridge in the vessel, usually made of a round bar material. A center pipe can also be used for the same purpose, but is made instead with perforated effect and directs flow through the cartridge.

### Centipoise

One one-hundredth of a poise. A poise is the unit of viscosity expressed as one dyne per second per square centimeter.

### Centistoke

One one-hundredth of a stoke. A stoke is equal to the viscosity in poises times the density of the fluid in grams per cubic centimeter.

### Clear water pressure drop

Differential pressure across the filter as measured using clean water at a particular flow rate.

### Coagulant

That which produces agglomeration of suspended solids.

## Glossary

Laws of Physics & Common Equations

» Water and Suspended Solid Conversions  
» Decimal Equivalents  
» Pressure Conversion Table  
» Conversion Factors

## Glossary Co - Ef

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Coagulant

That which produces agglomeration of suspended solids.

### Coalescing

The action of uniting of small droplets of one liquid preparatory to its being separated from another liquid.

### Contaminant

Any undesirable particle or impurity in a stream.

### Core

An inner material used for the center of an element as support, which may also be called a center tube when used with string-wound filters.

### Corrosion

The conversion of metals into oxides, hydrated oxides, carbonates, or other compounds due to the action of air, water or both. Salts and sulphur are also important sources of corrosion. Removal of solids and water reduces the effect or speed of corrosion in many cases, and in other cases, corrosion inhibitors are used to reduce the effect of corrosion.

### Degradation

The loss of desirable physical properties by a textile material as a result of some process or physical/chemical process. Also, the wearing down or reduction in the efficiency of a media.

### Delta P (P)

A symbol (P) designating pressure drop. The difference in pressure between two points, generally measured at the inlet and outlet point of a filter, separator/filter, etc. Normally measured in pounds per square inch (psi), inches of mercury (in. Hg.), or inches of water (in. H<sub>2</sub>O). Also known as pressure drop.

### Density

The weight per unit volume of a substance (specific weight).

### Depth

A filter medium which primarily retains contaminants with the tortuous passages within the thickness of the element wall. Depth-type filtration Filtration that is accomplished by flowing a fluid through a mass filter media, with a much longer and random path through the filter. The density of the structure can be density graded, which is of particular advantage where the particular sizes of the contaminant are widely distributed. Certain types of solids, or combinations of solids, do not work well

with surface filtration, and depth filtration is found to be more suitable.

### Dilatant

A flow condition where certain liquids will show an increase in viscosity as the rate of shear or flow is increased.

### Discharge

The flow rate through a filter.

### Effective area

The area of a medium that is exposed to the flow, and is usable for its intended purpose: coalescing, filtering or separating. This is the opposite of blind spots or dead area.

### Effective open area

Area of the filtering medium through which the fluid may flow.

### Efficiency

The degree to which an element will perform in removing solids and/or liquids, usually expressed as output divided by input.

## Glossary

Laws of Physics & Common Equations

» Decimal Equivalents  
» Pressure Conversion Table  
» Conversion Factors

## Glossary E - F

A | B - Ce | Co - Ef | E - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Element

The medium used in a vessel to perform the function of filtration or separation. Also called the cartridge or filter. The porous device which performs the actual process of filtration.

### Emulsion

A finely divided suspension of an oil in water or vice versa. Also, a dispersion of finely held particles in a stream which do not necessarily dissolve in each other, but are held in suspension.

### Entrainment

Mist, fog or droplets of a liquid which are usually considered to be a contaminate when encountered in the filtration industry.

### Feed

Liquid to be processed containing one or more liquid phases, such as an emulsion, and/or suspended solids, and/or insoluble solids.

### Felt

A nonwoven sheet of fibers, made by a combination of mechanical and chemical actions, including pressure, moisture and heat.

### Fiber

A flexible material with two relatively small dimensions and one long dimension.

### Fiber migration

Undesirable movement of filter material from the media into the feed stream.

### Filter

A term generally applied to a device used to remove solid contaminants from a liquid or gas, or to separate one liquid from another liquid or gas. A filter, as referred to in the filtration industry, is a device which removes contaminants.

### Filtration efficiency

Expressed as a percent of contaminant introduced to the system. It is the ability of a filter to remove specified contaminants at a given contaminant concentration under specified test conditions.

### Filter element life

The span of operation from clean unit to a predetermined pressure drop build up, usually measured in elapsed time.

### Filter medium

The porous material mounted on a plate or frame which separates the solids from the liquids in filtering. Also referred to as filter cloth, filter plate or septum. The material that performs the actual process of filtration.

### Filtrate

Filtered fluid which flows out of a filter.

### Filtration rating

The diameter of the largest hard spherical particle that will pass through a filter under specified test conditions. This is an indication of the largest opening in the filter medium.

### Flow characteristics

The nature of fluid movement as being either turbulent, laminar, constant or of a variable rate, to various degrees.

### Flow rate

The rate at which a product is passed through a vessel or system, generally expressed as gallons per minute, cubic feet per minute, per hour, per day, etc.

### Fluid

A liquid or gas which can be filtered by passing through a filter.

## Glossary G - Me

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Gage pressure

All pressure greater than atmospheric pressure, as read on a pressure gage.

### Gel

A semi-solid that is susceptible to pressure deformation. Gels have the habit of sticking to other surfaces.

### Glazed finish

A finishing process that produces a smooth, highly polished surface using extreme temperature. Eliminates filter fiber migration.

### Gradient density

A media of different densities, with one media packed around the center tube and a media of less density around the outside. Both medias are tapered at opposite ends, which allows high flow through the less dense media, and tighter filtration through the dense media.

### Housing

A container for a filter element(s). Also known as a vessel.

### Hydraulics

The study of fluids at rest or in motion.

### Hydrophilic

Having a strong affinity for or the ability to absorb water.

### Hydrophobic

Lacking affinity for or the ability to absorb water.

### Hydrostatic test

A test conducted with either air, water or other fluids at a given value over design pressure, to prove the structural integrity of a pressure vessel.

### Immiscible

Incapable of being mixed; insoluble; the opposite of miscible.

### Impregnation

The process of treating a coarse filter medium with resins.

### Impurity

Any undesirable material in the fluid.  
*See contaminant.*

### Initial pressure drop

A loss in pressure between the inlet and the outlet connections upon the start of flow through a vessel using new elements.

### In-line

When inlet and outlet connections are positioned at the same height on the opposite sides of a vessel so that an imaginary straight line can be drawn connecting one to the other.

### Insoluble

Incapable of being dissolved in a fluid; the opposite of soluble.

### Matrix

The structural support yarn or twine in wound elements, usually wound in a diamond pattern.

### Maximum operating pressure

The highest pressure allowed in a system.

### Media/ Medium

A porous or slotted mass in a filter element that separates solids from a fluid by a difference in the size of openings, and also through direct containment. A material of controlled pore size or mass through which a product is passed in order to remove foreign particles held in suspension, or to repel droplets of coalesced water; or a material without controlled pore size, such as glass fiber mats, which contribute to filtration, coalescence, or separation of two immiscible liquids.

## Glossary

## Glossary Me - Pl

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Media migration/ Migration

The carry-over of fibers from the filter, separator elements or other filter, into the effluent. The contaminant or media released to pass downstream from the filter element.

### Membrane

In the filtration industry, the term is used to describe the media through which the liquid stream is to be passed or exchanged. Membranes are usually associated with ion exchanged media such as dialysis, osmosis, diffusion, etc., although filter paper itself could be classified as a membrane.

### Micron

A short unit of length in the metric system, equal to onemillionth of a meter, 10<sup>-4</sup> centimeter, 10<sup>-3</sup> millimeter, or 0.000039 of an inch. A micron is used as a criterion to evaluate the performance or efficiency of a filter media, or to describe the condition of either the influent or effluent. Usually stated in terms of being either absolute or nominal.

### Modular

A filter element which has no separate housing of its own, but whose housing is incorporated into the equipment it services. It may also incorporate a suitable enclosure for the filter cavity.

### Monofilament mesh

A woven fabric with evenly-spaced holes. Each thread is a single filament. The mesh combines excellent strength with little or no fiber migration.

### Multifilament mesh

A type of woven fabric, where each thread consists of many smaller diameter threads twisted together.

### Newtonian

A liquid which does not change in viscosity when faced with a change in rate of shear, agitation or flow rate.

### Nominal rating

An arbitrary value determined by the filter manufacturer and expressed in terms of percentage retention by weight of a specified contaminant (usually glass beads) of a given size.

### NPT

National Pipe Thread standard.

### Open area ratio

The ratio of pore area of a filter medium, expressed as a percent of total area.

### Operating pressure

The normal pressure at which a system operates.

### Particle count

The practice of counting particles of solid matter in groups based on relative size. Frequently used in engineering, a filter to a specific task, or to evaluate the performance of a filter under specific operating conditions.

### Particle size distribution

A tabulation resulting from a particle count of solids grouped by specified micron sizes to determine the condition of either the influent or effluent stream.

### pH

The value indicating the acidity or alkalinity of a material. It is the negative logarithm of the effective hydrogen ion concentration. A pH of 7.0 is neutral, less than 7.0 is acidic, and greater than 7.0 is considered a base.

### Pleated

A filter element whose medium consists of a series of uniform folds and has the geometric shape of a cylinder, cone, disc, plate, etc.

## Glossary Pl - Se

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Plugged

The condition of a filter when it has collected its full capacity of contaminants and will not pass any more fluid.

### Porosity

The property of a solid which contains many minute channels or open spaces. The fraction is a percentage of the total volume occupied by these channels or spaces. Also describes a filter media which may have larger pores than other media.

### Prefilter

A filter for removing gross contaminate before the product stream enters the separator.

### Pressure

The force exerted per unit area by a fluid, typically measured in pounds per square inch (psi).

### Pressure, absolute

Gage pressure plus 14.7 psi.

### Pressure, atmospheric

The force exerted by the atmosphere at sea level, which is equivalent to 14.7 psi.

### Pressure drop

The difference in pressure between two points, generally at the inlet and outlet of a filter or a separator/filter. Measured in pounds per square inch gage, or inches of mercury. *See delta P.*

### PSI

Pounds per square inch.

### PSIA

Pounds per square inch absolute.

### PSID

Pound per square inch differential.

### PSIG

Pounds per square inch gage.

### SAE

The Society of Automotive Engineers.

### SAE number

A classification of lubricating oils for either crankcases or transmissions, in terms of viscosity, as standardized by the Society of Automotive Engineers.

### Saybold Seconds Universal (SSU)

Units of viscosity as measured by observing the time in seconds required for 60 ml. of a fluid to drain through a tubular orifice 0.483 inches long by 0.0695 inches in diameter at stated conditions of temperature and pressure.

### SCFD

Standard cubic feet per day.

### SCFH

Standard cubic feet per hour.

### SCFM

Standard cubic feet per minute.

### Separation

The action of separating solids or liquids from fluids. May be accomplished by impingement, filtration or by coalescing.

## Glossary

Laws of Physics & Common Equations

## Glossary Se - To

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### Separator/filter

A vessel which removes solids and entrained liquids from another liquid or gas, using some combination of a baffle and/or coalescer, filter or separator element. A vessel may be single stage, two stage, or single or two stage with prefilter section for gross solids removal. The usual application is the removal of water from gas or another immiscible liquid. General reference to term applies the equipment capable of both separation and filtration to specific degrees of efficiencies.

### Service life

The length of time an element operates before reaching the maximum allowable pressure drop.

### Shell

The outer wall of a vessel, usually referred to as the body.

### Singed finish

The process of removing fibers from a cartridge or fabric by passing over a flame or other heat source. The process creates a smooth finish that inhibits fiber migration.

### Sintered

Media, usually metallic, that is processed to cause diffusion bonds at all contacting points, retaining openings for the passage of filtrate.

### Skid mounted

When one or more vessels with pumps and motors are mounted on a portable platform.

### Sludge

Dirt, carbon, water and chemical compounds found in oils.

### Solids

A mass or matter contained in a stream which is considered undesirable and should be removed.

### Solution

A single phase combination of liquid and non-liquid substances, or two or more liquids.

### Specific gravity

The ratio of a substance's weight to that of some standard substance (water for liquids and solids, air or hydrogen for gases). This is by definition a unitless value.

### Surface area

The total area of an element that is exposed to an approaching flow.

### Suspension

Solids or liquids that are held in other liquids.

### Suspended solids

Non-settled particles in a fluid.

### Tensile strength

The maximum stress a material that is subjected to a stretching load can withstand, without tearing.

### Thixotropic

A liquid which shows a marked reduction in viscosity as the rate of shear, agitation or flow rate is increased.

### Tortuosity

The ratio of the average effective flow path length to the minimum theoretical flow path length (thickness) of a filter medium.

## Glossary Tu - W

A | B - Ce | Co - Ef | El - F | G - Me | Me - Pl | Pl - Se | Se - To | Tu - W

### **Turbidity**

A cloudy or hazy appearance in a naturally clear liquid, caused by the suspension of colloidal liquid droplets or fine solids.

### **Turn-over**

The number of times the contents of the system pass through a filter per unit of time.

### **Ultrafilter**

A type of membrane used to remove very fine suspended submicronic particles as well as some dissolved solids.

### **Unloading**

The release downstream of trapped contaminant, due to a change in flow rate, mechanical shock and/or vibration, or as excessive pressure builds up, or due to a media failure.

### **Vacuum**

A reference to a pressure that measures below atmospheric pressure.

### **Vessel**

A container in which the filtration process occurs, through a filter media such as cartridges or bags that are installed inside.

### **Viscosity**

The degree of fluidity; also, the property of a fluid's molecular structure by virtue of which they resist flow; the internal flow resistance of a fluid; or, the resistance of flow exhibited by a liquid resulting from the combined effects of cohesion and adhesion. The units of measurement are the poise and the stoke. A liquid has the viscosity of one poise if a force of one dyne per square centimeter causes two parallel liquid surfaces one square centimeter in area and one centimeter apart to move past each other at a rate of one centimeter per second. There are a great many crude and empirical methods for measuring viscosity, which generally involve measurements for the time of flow or movement of a ball, ring or other object in a specially shaped or sized apparatus.

### **Wound**

A filter medium comprised of two or more layers of helical wraps of a continuous strand or filament in a predetermined pattern.

### **Woven**

A filter medium made from strands of fiber, thread or wire, interlaced into a cloth through the action of a loom.

## Laws of Physics & Common Equations

### **Pascal's Law**

Pressure exerted on a confined fluid is transmitted undiminished in all directions, and acts with equal force on all equal areas and at right angles to them.

### **Hydraulics**

Simply, a means of power transmission.

### **Work**

Force acting through distance.

$$\text{WORK} = \text{FORCE} \times \text{DISTANCE}$$

Example:

Work = lbs. x inches, or  
Force (lbs.) x Distance (ins.)

### **Power**

The rate of doing work.

$$\text{Power} = \frac{\text{Work}}{\text{Time}} = \frac{\text{Force} \times \text{Distance}}{\text{Time}}$$

### **Force**

The Force (pounds) exerted by a piston can be determined by multiplying the piston area (sq. inches) by the pressure applied (psi).

$$\text{Force} = \text{Pressure} \times \text{Area}$$

### **Volume**

To determine volume (cubic inches) required to move a piston a given distance, multiply the piston cross sectional area (sq. inches) by the stroke required (inches).

$$\text{Volume} = \text{Area} \times \text{L}$$

### **Compression of Hydraulic Oil**

Hydraulic oil serves as an excellent lubricant, is practically non-compressible. It will compress approximately 0.4 of 1% at 1000 psi and 1.1% at 3000 psi at 1200.

### **Weight of Hydraulic Oil**

The weight of hydraulic oil may vary with a change in viscosity; however, 55 to 58 lbs. per cubic foot covers the viscosity range from 150 SSU to 900 SSU at 1000°F.

### **Pressure in a Column of Oil**

The pressure at the bottom of a one-foot column of oil will be approximately 0.4 psi. To find the approximate pressure in psi at the bottom of any column of oil, multiply the height in feet by 0.4.

### **Atmospheric pressure**

Equivalent to 14.7 PSIA at sea level.  
 $\Delta P$  means pressure difference.

### **Gage readings**

Gage readings do not include atmospheric pressure unless marked PSIA.

### **Pressure drop**

There must be a pressure drop (pressure difference) across an orifice or restriction to cause flow through it. Conversely, if there is no flow, there will be no pressure drop.

### **Pumps and fluids**

Fluid is pushed, not drawn, into a pump. If pumping from an open reservoir, atmospheric pressure pushes the fluid into the pump. Some pumps are used specifically to create pressure. Any resulting flow is incidental. A pump does not pump pressure; its purpose is to create flow. A pump used to transmit power is usually positive displacement type.

### **Pressure**

Pressure is caused by resistance to flow. A pressure gage indicates the pressure in a given unit, measured in PSI.

## Water and Suspended Solid Conversions

**Water Pressure (PSI) to Feet of Head**

Pounds per Square Inch	Feet Head	Pounds per Square Inch	Feet Head
1	2.31	110	253.98
2	4.62	120	277.07
3	6.93	130	300.16
4	9.24	140	323.25
5	11.54	150	346.34
6	13.85	160	369.43
7	16.16	170	392.52
8	18.47	180	415.61
9	20.78	190	438.71
10	23.09	200	461.78
15	34.63	250	577.24
20	46.18	300	692.69
25	57.72	350	808.13
30	69.27	400	922.58
40	92.36	450	1039.05
50	115.45	500	1154.48
60	138.54	600	1385.39
70	161.63	700	1616.30
80	184.72	800	1847.20
90	207.81	900	2078.10
100	230.90	1000	2309.00

**NOTE:**  
One pound of pressure per square inch of water is equal to 2.309 feet of water at 62°F. To find the feet head of water for any pressure not given in the table, multiply the pressure pounds per square inch by 2.309.

**Water Feet of Head to PSI**

Pounds per Square Inch	Feet Head	Pounds per Square Inch	Feet Head
1	0.43	110	47.64
2	0.87	120	51.97
3	1.3	130	56.3
4	1.73	140	60.63
5	2.17	150	64.96
6	2.6	160	69.29
7	3.03	170	73.63
8	3.46	180	77.96
9	3.9	190	82.27
10	4.33	200	86.62
15	6.5	250	108.27
20	8.66	300	129.93
25	10.83	350	151.58
30	12.99	400	173.24
40	17.32	450	194.85
50	21.65	500	216.55
60	25.99	600	259.85
70	30.32	700	303.16
80	34.65	800	346.47
90	39.98	900	389.78
100	43.31	1000	433

**NOTE:**  
One foot of water at 62°F is equal to 0.433 pounds of pressure per square inch. To find the pressure per square inch for any feet head not given in the table, multiply the feet head by 0.433.

Pascals	1.01325x10 <sup>5</sup>	1.000x10 <sup>5</sup>	10 <sup>-1</sup>	3.386x10 <sup>3</sup>	2.491x10 <sup>2</sup>	9.8067	6.894x10 <sup>3</sup>	47.88	1.333x10 <sup>2</sup>	

To use the above table, locate the initial measurement along the top of the table, and multiply by the number in the row that corresponds to the final measurement in the left column.

**For example:** to convert from Atmospheres to Pascals, locate the Atmospheres column at the top of the table and move down to the row that corresponds to Pascals on the left, which says to multiply Atmospheres by 1.01325 x 10<sup>5</sup> to obtain the equivalent measurement in Pascals.
